

The Journal of Herpetological Medicine and Surgery is designed to be a source of information for veterinarians involved in public and private practice on reptiles and amphibians. The Journal is interested in all aspects of care for these species including natural history and maintenance in captivity as well as particular medical and surgical problems. Authors may submit manuscripts for publication in the following sections:

In My Experience: Brief clinical experiences regarding adverse or unusual drug reactions, empirical drug dosages, therapeutic modalities, diagnostic aids, disease trends, species idiosyncrasies and herpetological medical care and husbandry in general.

Case Reports: Reports of clinical cases with detailed introduction, signalment, history, captive care, laboratory and pathologic data, diagnosis, therapy and results. Cases need be neither unusual nor successful in their outcome, but they should be informative to veterinary practitioners. While multiple cases are preferable, single cases are acceptable if thoroughly documented. Discussion should emphasize the important clinical, pathologic and therapeutic features; should identify what is new and not previously appreciated and should include appropriate review of literature.

Original/Review/Roundtable Articles: In-depth articles or discussions focusing on a specific disease or topic; review of literature relating to a specific topic; clinical data and research concerning specific diseases or species. An approved Institutional Animal Care and Use Committee (IACUC) protocol number should be provided for manuscripts involving animal research. If one is not available, an explanation should be forwarded with the manuscript.

Manuscript Submission

Manuscripts should be submitted electronically at jhms.allentrack2.net. Before you use the JHMS website you first register your log in name and create a password. Follow detailed author instructions and manuscript guidelines. There is online help to assist you or you can contact the Editor-in-Chief, Mark A. Mitchell, DVM, MS, PhD at mmitch@illinois.edu. Manuscripts files should be in word, WordPerfect or text formats. Tables should be in XLS or doc formats. Figures and images should be 300 dpi, Tiff, EPS, PDF or JPG formats.

1) An abstract is required for all manuscripts except IMEs. The abstract should summarize your key points.

2) A list of six key words should precede all articles. Key words should include genus and species.

3) Species mentioned should be listed by common name, then italicized taxonomic name (for example, inland bearded dragon, *Pogona vitticeps*). Where applicable sex, age, whether wild-caught or captive-born and length of time in which its history can be documented should be included.

4) All measurements should be given in the metric system. Biochemical values should be listed in Système International units with conventional units in parenthesis, or on the next line (if in a table). Temperatures should be in Celsius, with Fahrenheit in parentheses.

5) Abbreviations may be used in the text if the full meaning was previously stated but should not be used to begin a sentence. Standard pharmaceutical abbreviations need not be explained. Numbers less than ten should be spelled out.

6) Drugs and all other products should be listed by generic or chemical name followed by, in parentheses, trade name, concentration,

manufacturer, city and state or country (if other than United States). Dosages of all drugs should be given in mg/kg or ml/kg (if mgs are inappropriate), not how many milligrams or milliliters were given to an individual animal. Route of administration (abbreviated), frequency of dosage and duration of treatment should be indicated. For example, 2.5 mg/kg amikacin (Amiglyde V, 250 mg/ml, Fort Dodge Laboratories, Fort Dodge, IA), SC q 72 hr for 6 treatments.

7) References should be cited by author and year, in parenthesis, and then listed in alphabetical order at the end of the text. For references with three or more authors, citations in text need include only the first author followed by *et al.*; all authors should be listed in the bibliography. Journal titles should be abbreviated in a consistent manner. Use the following style: (Frye, 1998) then (Schumacher *et al.*, 1994) then (Bennett and Mader, 1996) then (Lawton, 2000).

Chapter or Article in a Book

1. Bennett RA, Mader DR. 1996. Soft tissue surgery. *In* Mader DR (ed): Reptile Medicine and Surgery. WB Saunders Co, Philadelphia, PA:287-298.

Article in Journal

2. Schumacher J, Jacobson ER, Homer BL, Gaskin JM. 1994. Inclusion body disease in boid snakes. *J Zoo Wild Med*, 25(4):511-524.

Proceedings

3. Lawton MPC. 2000. Reptilian ophthalmology. *Proc ARAV*, 197-202.

Personal communication

4. Frye FL, DVM, MSc, FRSM. Personal communication. 1998. FL Frye and Associates, 741 Plum Lane, Davis, CA 95616.

8) Black and white photographs are preferable to color. Color is used only if it significantly improves understanding. Short figure legends should be provided for each figure. Each figure, table or photograph should be submitted as a separate file with a corresponding file name.

9) Guidelines for Digital Art. Screen display of an image is much different from the printed version. The resolution of an image on the computer screen, which is usually 70-90 dpi, is too low for adequate quality in a final printed form. For publication purposes, images must be at least 1200 dpi for line art and 300 dpi for halftones (photos). Combination art (halftone and text) should be saved at a resolution of 600 dpi. Halftones and line art should be cropped as close as possible to the image border (1 or 2 points).

10) All manuscripts are submitted with the understanding that all authors have seen the article. The Journal of Herpetological Medicine and Surgery reserves the right to reject any manuscript. Submitted manuscripts are subject to anonymous peer review. Authors are expected to respond to reviewers' comments and make revisions within 14 days. Revised manuscripts are sent out for review again. Manuscripts that pass peer review are accepted for publication if the author has addressed all questions and concerns raised by review.

11) Acknowledgments should be limited to persons who have contributed materially to the content.

12) If funding or support for an article was provided it should be stated.
